

**AMENDMENTS TO THE DRAWINGS:**

Please substitute the Replacement Sheets 2/6 and 5/6 for the drawing figures on Sheets 2/6 and 5/6 previously in the application. Each of these newly submitted drawing figures (i.e., Figs. 2 and 5) has been amended to include an additional reference character "205" for the anode gas flow channel 205, disclosed, for example, in the paragraph bridging pages 9 and 10 of Applicants' specification; and also to include a reference character "50" for a continuing portion (wall) which is a part of member 210 for connecting the humidifier to the unit cell. This wall 50 partitions the water permeable layer 201 and gas channel 205 in Fig. 2, or gas channel 205 in Fig. 5, from the water channel 204. As can be appreciated from Figs. 2 and 5 as previously in the application, and as clarified from the presently amended Figs. 2 and 5, through the member 210 with wall 50, the water is exclusively supplied to the water-retaining layer 203 from the water channel 204, or from the water channel through the filter 501. It is respectfully submitted that these amendments to the drawings do not add new matter to the application, noting in particular the previously considered drawings in the above-identified application.
